

About the project

In the primary school students have to recognize and name it properly simplest geometric shapes of plane and space: section, square, rectangle, triangle, circle, cube, ball. Know the names of elements of plane shapes. Apply knowledge of geometric shapes of plane and space to the simplest to solve problems.

We want students to learn geometry through a variety of exciting activities during this project.

AIMS

Give students the geometric knowledge they need to have in the curriculum.

To provide opportunities for a wider interest than age-related.

Show students that learning geometry can be easy and fun.

WORK PROCESS

We plan to continue this project for nine month.

September: partner search, acquaintance, informing students and their parents.

October-April: activities about geometry shapes (for each figure one month).

May: summary of the project.

EXPECTED RESULTS

Students will acquire the necessary knowledge about seven geometric shapes.
