

## About the project

Programming is becoming increasingly important in today's digital world. Learning to program helps students acquire valuable skills, learning them consistent thinking that applies to all areas of life.

However, despite the rapidly advancing technologies in our lives, it is no less important to know and respect the traditions of our country that help nurture our identity. It is pity that the recently growing generation is less and less aware of and adheres to the customs and traditions cherished by our ancestors since ancient times. Globalization and the Western culture that came with it have a great influence.

With this project, we are going to combine these two important areas of life - ethnic culture and programming. As we will soon celebrate one of the biggest and most beautiful holidays of the year - Easter, we will get acquainted with and introduce the partners to the Easter customs of our country during the programming.

### AIMS

1. Help students get to know and appreciate the ethnic culture of their nation while improving their digital competence.
2. To motivate students to respect their country and be tolerant of other cultures.
3. To fortify the importance of critical thinking and enhance problem-solving programming with a Scratch.
4. To improve communication skills in a foreign language.

This project is also aimed at emphasizing our student's role in their learning process, giving them the opportunities to cooperate, ask questions, and share ideas.

### WORK PROCESS

Starting with short partners introduction, students will work with Scratch program. They prepare and share with partners three objects using Scratch program:

1. Easter cards,
2. Presentations about Easter traditions,
3. Games related to Easter.

Partners will also share moments of their Easter celebration.

### EXPECTED RESULTS

Students will get acquainted with their own and partner country's Easter traditions.

Students will improve their skills by working with the Scratch program by collaborating and sharing experiences, they can learn from each other.

Improve Competence in Initiative and Creativity, Digital and Communication.
